

GLUE SPREADER HGS-RC

Designed to achieve the best spreading quality, HGS-RC is recommended when applications of very thin Hi-Gloss or Super-Mat decorative materials are required.

Standard configuration

- Top side glue application
- Spreading and dosing rolls in steel
- Independently heated and motorized rolls
- Electronic speed adjustment on each roller and transport rollers
- Motorized thickness adjustment, independent of spreading and finishing rollers
- Self-adjustable pneumatic system on the lateral glue sealing plates
- Hoods for connection to the air extraction
- Variable speed
- Digital display

Main options

- Melting unit
- Remote servicing / communication devices
- Lateral removal from production line for maintenance (wheel + track)

Added value

High precision glue application
"Mirror finishing" glue application
Glue sealing plates easy removal and cleaning
